DETAILED ACTION***Reasons for Allowance***

Claims 1, 2, 4, 15-18, 24-29, 55-58, 61 and 68-93 have been allowed.

The present invention is directed to electronic commerce. Obtaining goods and services using a payment card is old and well known. For example, Gorog (US 4,947,028) teaches ordering goods and services at a terminal using a credit card ('028, figure 1; column 4/22-5/2) wherein credit card and order data are transmitted over a network for authorization and order fulfillment, respectively ('028, column 6, lines 30-36). Elgamal (US 5,671,279) teaches an electronic commerce protocol comprising a client computer, a merchant computer and a gateway ('279, figures 1 and 2). Elgamal also teaches encrypting a credit card number and transaction information for transmission between client, merchant and gateway ('279, column 4, lines 33-36 and 60-64). Payne et al. (US 5,715,314) teach using a credit or debit card reference for completing a transaction ('314, column 7, lines 14-31) while Walker et al. (US 6,163,771) teach a database at an issuing bank that pairs a user credit or debit card number with corresponding reference numbers ('771, figure 13) and using a reference number from the database to make a purchase ('771, figures 9A and B). However, the prior art does not teach or fairly suggest, singly or in combination, requesting a card issuer gateway to authorize a transaction between a consumer and a merchant using *a wallet initiation message comprising a payment amount, an order description, a merchant identifier and a timestamp*, and authorizing the transaction by the

gateway by sending an *authorization token comprising a reference* to the merchant, wherein the reference represents the consumer's credit or debit card.

Conclusion

Any comments considered necessary by Applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
